AB

**Abdul Basit Mehboob**

BSC ARTIFICIAL INTELLIGENCE
NLP & DEEP LEARNING

### CONTACT

- abdulbasitmehboob1122@gmail.com
- +92 301 830 7783
- Islamabad, Pakistan
- linkedin.com/in/abdul-basit-a518133a6

### CORE SKILLS

- Python
- Natural Language Processing
- Deep Learning
- TensorFlow / Keras
- Hugging Face
- C++ / Java

### LIBRARIES & TOOLS

spaCy · NLTK · NumPy · Pandas · Matplotlib · VS Code · PyCharm · Figma · Eclipse

### INTERESTS

Large Language Models · Generative AI · Computer Vision · AI Research · Applied NLP

### LANGUAGES

- Urdu — Native
- English — Professional

# Abdul Basit Mehboob

**AI ENGINEER · NLP RESEARCHER · OPEN TO INTERNSHIPS**

## PROFESSIONAL PROFILE

Third-year BSc Artificial Intelligence student with a strong foundation in machine learning, deep learning, and natural language processing. Demonstrated ability to independently design and deliver end-to-end AI systems — including a transformer-powered medical symptom analyzer and a DCGAN-based image generation model trained on 3,000+ images. Highly motivated to apply academic expertise in a professional environment and contribute to impactful, real-world AI solutions.

## EDUCATION

**Bachelor of Science in Artificial Intelligence (BSAI)** — **3.15** / 4.00 CGPA

Barani Institute of Information Technologies
PMAS Arid Agriculture University, Rawalpindi

5 Semesters Completed

## PROJECTS

### Medical Symptom Analyzer — NLP · Healthcare AI

*Python · spaCy · NLTK · Hugging Face Transformers*

- Designed and built an end-to-end NLP pipeline that reads unstructured patient text, identifies symptoms via Named Entity Recognition, and predicts possible diagnoses.
- Integrated Hugging Face transformer models to capture sentence-level context, significantly improving prediction accuracy over keyword-based baselines.
- Applied clinical NER techniques to extract, classify, and normalize medical terminology from free-form natural language input.

### Synthetic Fish Image Generator (DCGAN) — Computer Vision · Generative AI

*Python · TensorFlow · Keras*

- Architected and trained a Deep Convolutional Generative Adversarial Network (DCGAN) capable of producing photorealistic images across three fish species.
- Managed the complete ML lifecycle: dataset curation (3,000 images), preprocessing, model architecture design, hyperparameter optimization, and output quality evaluation.
- Iteratively refined generator-discriminator balance to minimize mode collapse and achieve high visual fidelity in generated outputs.

## TECHNICAL SKILLS

| | |
|---|---|
| **Programming Languages** | Python, C++, Java, HTML, CSS |
| **AI / ML Frameworks** | TensorFlow, Keras, Hugging Face Transformers, spaCy, NLTK |
| **Data Science Libraries** | NumPy, Pandas, Matplotlib |
| **Development Tools** | VS Code, PyCharm, Eclipse, Visual Studio, Figma |
| **Areas of Expertise** | Machine Learning, Deep Learning, Artificial Neural Networks, Natural Language Processing, Generative AI |

## KEY STRENGTHS

**Self-Directed Learner**
Built complex AI systems independently without industry mentorship

**Full ML Lifecycle**
Data prep → model design → training → evaluation, end-to-end

**NLP Specialist**
Hands-on with transformers, NER, and clinical text processing

**Strong Academic Record**
3.15 CGPA across 5 semesters in a competitive AI program
